

A **PROGRESSIVE** take on **INFILL**.

As a vetted partner of the **Association of Educational Purchasing Agencies (AEPA)**, we understand the importance of providing cutting-edge, performance-driven solutions for sports field owners. Every synthetic turf field has a different set of desired playability characteristics. It's good to be aware that there are many elements that go into selecting the perfect system. Whether you are about to execute a new build or planning for turf replacement, you want to be educated on your options so that you can make an informed decision. As you're aware, most synthetic turf systems are infilled with crumb rubber. Crumb rubber has many great benefits and has been proven to be a very reliable option year over year. With that said, the turf industry is in the midst of an evolution that has opened the doors to a new, dynamic way of looking at system components. Therefore, if you are a fan of innovation and are in search of a modernized solution, check out our progressive infill lineup offered at an exclusive cost to **Oakland Schools** members. Allow us to introduce you to the following game changers:

envirofill®

powerfill™

safeshell®

- ➔ **Maximum Performance.** Plays firm, fast, and safe.
- ➔ **Consistent** Offers natural heat reducing properties
- ➔ **Clean.** Infused with permanent antimicrobial protection.
- ➔ **Reusable.** Its durability allows for multiple lifecycle use.
- ➔ **Flexible Plastic.** Made from virgin, bio-based products.
- ➔ **Non-Abrasive.** Aids impact due to its softness and flexibility.
- ➔ **Safe.** Free from off-gassing, phthalates, and heavy metals.
- ➔ **Heat Resistant.** High melt point of 250°F.
- ➔ **Cool.** Offers evaporative cooling properties.
- ➔ **Organic.** Crafted from a blend of US-grown walnut shells.
- ➔ **Low Maintenance.** Same play wet or dry, and doesn't float.
- ➔ **Safe.** Allergens are removed below FDA limits.
